## Image Optimization Guidelines

### Next.js Image Component Usage

All images should be used with the Next.js Image component for automatic optimization:

```
import Image from 'next/image';

<Image
  src="/images/hero/container-port.jpg"
  alt="Southern Haulers container drayage operations"
  width={3000}
  height={1999}
  priority={true} // For above-the-fold images
  placeholder="blur"
  blurDataURL="data:image/jpeg;base64,..." // Add blur placeholder
  className="object-cover"
/>
```

### Image Sizes Needed

For optimal performance, create the following versions of each image:

**1. Hero Images:**

- Desktop: 1920x1080
- Tablet: 1024x768
- Mobile: 640x427

**2. Service Images:**

- Desktop: 1200x800
- Tablet: 768x512
- Mobile: 480x320

### 3. Icon/Feature Images:

- 400x400 (square format)

## WebP Conversion

Convert all JPGs to WebP format for better compression:

```
# Using cwebp tool
cwebp -q 80 input.jpg -o output.webp
```

## Blur Placeholders

Generate blur placeholders using Next.js:

```
npm install plaiceholder
```

Then generate placeholders in your build process.

## Download Instructions

To download and prepare images for the project:

```
# Create image directories
mkdir -p apps/web/public/images/{hero,services,ports,locations,warehouse,agricultural}

# Download images using curl or wget
# Example:
curl -o apps/web/public/images/hero/container-port.jpg \
  "https://plus.unsplash.com/premium_photo-1661963131307-f79ad259ccfc?w=1920"

# Convert to WebP
cwebp -q 80 apps/web/public/images/hero/container-port.jpg \
  -o apps/web/public/images/hero/container-port.webp
```

## Attribution (Optional)

While not required, we can optionally credit photographers:
